

Invest wisely

Avadis Asset Growth gives you flexibility and independence at low cost. Our choice of seven investment strategies offers you the right option for every time horizon – whether you are considering private pensions in the long term, or a purchase next year.

Low cost

Avadis Asset Growth costs less than comparable products thanks to low asset management and administration costs with lean administrative structures. Avadis consistently passes these advantages on to you. Low costs have a positive impact on results. This is another reason why a comparison of returns shows that Avadis has been in a leading position for years.

Simple

Investing on global financial markets is simple with Avadis. You can plan your strategy on the Internet or benefit from a personal consultation to define your risk profile: do you want to make long-term provision for your pension without having to worry about day-to-day price fluctuations? Or do you need the money next year and therefore wish to avoid taking on any risks? Answers to questions like these will produce the right investment strategy for you.

Flexible

You can start out with just 50 francs, and you can select a standing order or payments according to your situation: you decide how much you want to invest, and when. You can make deposits and withdrawals as well as change your investment strategy at month-end.

Diversified

You are investing in about 2,000 different equities and 1500 bonds with worldwide coverage. This gives you a good spread and adds stability to your portfolio. The investment segments are regularly reset to their initial weightings, so once a risk has been selected, it remains constant regardless of market movements.

Independent

Avadis has no obligations to any banks or insurance companies, and it selects its asset managers on the basis of their track records. Avadis' asset managers operate within clear parameters and their work is closely monitored.

Forty years of success

Avadis Asset Growth began operating over 40 years ago when the ABB industrial group set up a foundation to promote private pension provision for its employees, paying a company premium in addition to the returns from the investment strategy. Nowadays various companies make use of Avadis Asset Growth so that their employees can benefit from additional interest (super interest) on their investments.
